Robinhood 30

RH30 Product Overview & Risk Disclosure

One token backed by fixed amounts of 30 Robinhood Chain coins, held in a contract with no owner and no upgrade path. Buy and sell it with ETH in one transaction, or mint and redeem it directly for the underlying coins.

$1.00	30	0.25%	0.5%
Launch value per RH30	Coins at launch, max 8% each	Trade fee on one-click buys and sells	Yearly fee, fixed in code

RH30 at a glance

Robinhood 30 (ticker RH30) is an ERC-20 token on Robinhood Chain. Each RH30 represents a fixed share of a basket of 30 coins that the RH30 contract holds itself. There is no price oracle and no pool of RH30 against which trades are made: tokens are created when the coins behind them are deposited, and destroyed when those coins are paid back out.

Name / ticker	Robinhood 30 / RH30
Network	Robinhood Chain (chain ID 4663)
Token and basket contract	`0x22700264FA369d819228B510cc877808CE1e0852`
One-click router	`0xC058a204776551dE99b2a818EdA36BA37F1171A3`
Launch	Deployed 27 November 2026 (block 123,850,965). First mint 27 November 2026 00:27 UTC, 100.58 RH30.
Launch value	$1.00 per RH30, set from market prices at deployment
Basket	30 coins at launch; at most 8% per coin in any recipe; at most 40 coins
Fees	0.25% of ETH on each router buy and sell, to the Bucket Shop Treasury. 0.5% a year, accrued as newly minted RH30 to the fee recipient. Both fixed at deployment.
Rebalancing	No more often than every 80 days (quarterly). Every trade is posted on chain 7 days ahead; only posted trades can run, within a 7-day window.
Control	No owner, no pause, no blacklist, no transfer tax, not upgradeable. A guardian can cancel a posted rebalance and do nothing else.
Source code	Verified, exact match, on Sourcify and the Robinhood Chain Blockscout explorer

In one sentence: holding RH30 is holding a slice of every coin in the basket, which you can take out of the contract yourself at any time.

02

How it works

Buying and selling with ETH (the router)

You send ETH
to the router with the number of RH30 you want

→

Router buys each coin
in its own on-chain pool, in the exact amounts the basket needs

→

Coins go into RH30
and new RH30 are minted to you in the same transaction

A sale is the reverse: your RH30 are redeemed for their share of every coin, the router sells each coin for ETH, and the ETH is sent to you. The router keeps nothing between transactions. It takes 0.25% of the ETH on each buy and sell for the Bucket Shop Treasury, and returns any ETH you sent but did not spend in the same transaction. Every buy and sell carries a deadline and a limit you set (the most ETH you will pay, or the least you will accept).

Minting and redeeming directly (no trade fee)

Anyone can call `mint` on the RH30 contract by depositing every basket coin in proportion to what the contract already holds per token, and receive RH30. Anyone can call `redeem` at any time to burn RH30 and receive their share of every coin. Neither carries the 0.25% trade fee. Because RH30 can always be exchanged for its coins and back, its market value is anchored to the value of the coins behind it.

If one coin ever stops transferring, `redeemSkipping` lets a holder redeem while leaving that coin behind for the remaining holders, so one broken coin cannot block everyone's exit.

Launch mechanics

The first mint had to be at least 100 RH30, and 1 RH30 of it was sent to the burn address `0x…dEaD`, where it stays forever. Total supply can therefore never return to zero, which protects later holders from rounding attacks on an empty basket.

How the value of RH30 moves

The value of one RH30 is the market value of the coins it represents. If every coin doubles, one RH30 is worth about twice as much, less the 0.5% yearly fee (about 5% over ten years). Other people buying and selling do not change the value of your RH30: each buyer pays for the coins behind their own tokens, and each seller takes only their own share out.

03

Composition at launch

Weights were set at launch and the amount of each coin per RH30 was fixed so that one RH30 was worth $1.00 at market prices at deployment. Between rebalances the amounts per RH30 stay fixed and the weights drift with prices.

#	COIN	CONTRACT	WEIGHT	PER RH30

"Per RH30" is the number of whole coins backing one RH30 at launch, read from the contract (`getInitUnits`). The yearly fee slowly reduces the per-token amounts, and each rebalance resets them; `backingPerToken` returns the live figures.

04

Fees and costs

COST	AMOUNT	PAID TO	CHANGEABLE?
Trade fee, router buy and sell	0.25% of the ETH	Bucket Shop Treasury `0xe211898a898e5788878C91A1e458F3FFF3A8dD92`	No (immutable)
Yearly fee	0.5% a year, accrued continuously as newly minted RH30	Fee recipient `0x68173A42Cbd31ddE88a5b7cF6222b040d978C5a1`	No (immutable; code caps any index at 2%)
Direct mint and redeem	No trade fee	n/a	n/a
Pool fees and price impact	Charged by each coin's own pool on router trades	Liquidity providers	Depends on market
Network gas	A few cents per transaction	Robinhood Chain	n/a

Measured costs at launch

Measured on 27 November 2026 against live chain state: a buy of 100 RH30 cost 0.05998 ETH, about 1% above the value of the coins received. A full round trip (buy, then sell straight back) lost 1.87% at $100, $1,000 and $10,000, covering both trade fees plus pool fees and price impact. These figures move with pool depth and will differ at other times and sizes.

Who receives fees. Both fee destinations belong to the team behind RH30: the 0.25% trade fee goes to the Bucket Shop Treasury, and the 0.5% yearly fee is minted to wallet `0x68173A42Cbd31ddE88a5b7cF6222b040d978C5a1`, which also made the first purchase and is the guardian.

05

Rebalancing and controls

The rebalance cycle

1. **Post.** No sooner than 80 days after the last rebalance, the rebalancer posts the next recipe (coins and target weights, summing to 100%) together with every trade it will make: which coin it sells, how much, which coin it buys, through which pools, and the least it must receive. At most 80 trades.
2. **Notice, 7 days.** The plan is public on chain. Holders who disagree can redeem in full during this period.
3. **Trade window, 7 days.** The rebalancer may run the posted trades and nothing else, only through the fixed router, with proceeds returned straight to the RH30 contract. It can raise a trade's minimum but never lower it.
4. **Finalize.** The coin list is rebuilt; coins sold down to dust drop off. Anyone can finalize after the window closes.

Recipe limits enforced by the contract

- No coin above 8% of a recipe.
- Coins new to the basket may total no more than 30% of a recipe in any one rebalance.
- No more than 40 coins.

Roles

ROLE	ADDRESS	CAN	CANNOT
Rebalancer	`0x2CCc152AD68419f777531E6A40a52325e2A80EE2`	Post, cancel and execute rebalances under the rules above; hand the role to a new key	Move coins anywhere else, change fees, pause, upgrade
Guardian	`0x68173A42Cbd31ddE88a5b7cF6222b040d978C5a1`	Cancel a posted rebalance before or during trading	Trade, move coins, change any setting or role
Fee recipient	`0x68173A42Cbd31ddE88a5b7cF6222b040d978C5a1`	Receive the 0.5% yearly fee as RH30	Anything else
Owner	None	No owner and no admin function. Guardian, fee recipient, fee rates and router are fixed forever.	

06

Capacity and liquidity

Ceiling on new buys. Three basket coins (PONS, TENDIES and JUGGERNAUT) limit any single wallet to 2% of their supply. Because the RH30 contract is one wallet, those limits cap how much RH30 can ever exist. At launch the binding limit was JUGGERNAUT, putting the ceiling at about 2 million RH30 (about $2 million at launch value). The buy page shows the room left and stops offering buys near the ceiling. Redemptions and sales are not limited by this.

Size of one buy. Each router buy fills every coin in that coin's pool at once, so the thinnest pool sets the largest single trade. After routing changes on launch day, a single buy of about 116,000 RH30 fills; larger amounts can be bought in several transactions.

Routes are chosen per trade. The pools used for each coin are passed in with every buy and sell rather than stored in the contract, so routing can be improved without any contract change. Rebalance routes, by contrast, are posted in advance and fixed.

Selling into thin markets. A large sale can return noticeably less than the value of the coins shown, because each coin is sold into its own pool. Redeeming in kind avoids pool impact entirely.

07

Security and verification

- Source code for the RH30 contract and the router is verified as an exact match on Sourcify and shown as verified on the Robinhood Chain Blockscout explorer.
- The contracts were reviewed in-house before launch. An earlier draft let the rebalancer drain coins through a pool it controlled; that was closed by the posted-trades rule. Other findings (a cancel loophole, dust pinning, a tiny first mint, stray ETH) were fixed and are covered by regression tests run against live Robinhood Chain state.
- There has been no third-party audit.
- Ownership of the RH30 contract has been verified on Blockscout by the deploying wallet `0x97cD533466225E0ae07Ddf8691Ec024c28D51C4f`. A token information request (name, logo, description) has been submitted and is pending review.

Addresses

Rebalancer (keeper)	`0x2CCc152AD68419f777531E6A40a52325e2A80EE2`
Guardian and fee recipient	`0x68173A42Cbd31ddE88a5b7cF6222b040d978C5a1`
Treasury (trade fee)	`0xe211898a898e5788878C91A1e458F3FFF3A8dD92`

An earlier RH30 contract at 0xB344B37ab5eA5253a305908a18c8a7bf319827A5 was deployed the same day and never minted; it is not used and holds nothing. Only the address above is RH30.

08

Risk factors

- **Volatile assets.** The basket holds small, highly volatile coins. Their prices can fall sharply or to zero, and RH30 falls with them. You can lose most or all of what you put in.
- **Liquidity.** Many basket coins trade in thin pools. Buying, selling or rebalancing can move prices against you, and quoted values may not be achievable for large trades.
- **Smart contract risk.** The code cannot be changed or paused. A flaw cannot be fixed in place, and there has been no third-party audit.
- **Coin and pool risk.** A basket coin may have its own taxes, transfer limits, hooks or admin powers, and its pools may change or be drained. A coin that stops transferring can be left behind with `redeemSkipping`, at the cost of that coin's value.
- **Rebalancing risk.** Rebalances trade the basket and pay pool fees. The rebalancer chooses future recipes within the contract's limits; a holder who disagrees can redeem during the 7-day notice period but may realise a loss doing so.
- **Key risk.** The rebalancer and guardian are keys held by the team. If the rebalancer key were lost, no further rebalances could happen, though holders could still redeem. If it were stolen, the thief could post a harmful rebalance, but it would be public for 7 days before any trade could run; holders could redeem and the guardian could cancel it.
- **Concentration and related parties.** At launch the team wallet that receives the yearly fee held almost all RH30 in circulation. The team also builds and promotes several coins and products on Robinhood Chain, including BUCKET, which is in the basket.
- **Capacity.** Supply is capped by the 2% wallet limits of three coins; once reached, new buys stop.
- **Network and infrastructure.** RH30 depends on Robinhood Chain, its pools and its public RPC services. Outages can prevent trading or redeeming for a time.
- **Displayed data.** Prices, weights and changes shown on the buy page come from third-party data (DexScreener) and on-chain quotes, and can be delayed or wrong.
- **Regulatory.** The legal treatment of tokens like RH30 is unsettled and may change. You are responsible for whether you may lawfully hold and trade it where you live.

09

Important information

This document describes how the RH30 contracts work and the risks of holding RH30. It is not a prospectus, an offer to sell, or a solicitation of an offer to buy any security, and it has not been reviewed or approved by any regulator. RH30 is not registered with the U.S. Securities and Exchange Commission or any other authority.

Nothing here is investment, financial, legal or tax advice, or a recommendation to buy, hold or sell RH30 or any basket coin. Past or launch values say nothing about future values. Fees, routes and figures are stated as of 27 November 2026; the contracts on Robinhood Chain are the authoritative record, and where this document and the code differ, the code governs.

RH30 is not affiliated with, endorsed by or sponsored by Robinhood Markets, Inc. "Robinhood 30" refers to coins on Robinhood Chain. The names and logos of basket coins belong to their respective projects, whose inclusion is not an endorsement by or of them.
